

Save those memories ...

Most people have the good intentions of going through the archiving process but it's so time consuming that they usually give up and their memories are left in the closet to literally fade away. Don't let that happen to you.

By scanning your 35mm slides and negatives, you are actively preserving their vivid colors and crisp images for years to come.

Why digitally archive your slides and negatives:

- ✓ They age and fade over time
- ✓ They scratch easily
- ✓ Each trip to the lab causes new scratches and wear and tear to your negatives
- ✓ Slides fade easily in the intense light of the projector
- ✓ It is almost impossible to post-process slides

As part of our restoration and editing service, we personally examine every scanned image. We adjust color, balance, brightness, contrast and other parameters as needed to correct every scanned image. Scratches, dust, and other blemishes cannot always be removed from your slides and negatives.

1 – 500 Slides or Negatives	.45 each	4 -6 weeks
501 – 2000 Slides or Negatives	.40 each	6 -8 weeks
2001 or more Slides or Negatives	.35 each	contact us

Turn your photo clutter into a digital archive of lasting memories. Slides are saved as JPEG files on disk with a 1600x1200 resolution which allows for up to 8x10 printing.

Contact us at JAMARTphotoart@aol.com for more information.
